

# Connecting communities

## Changes to your electricity distribution charges

From 1 April 2023, our electricity delivery charges in your region will increase by an average of 10.4%.

We're here to connect the communities we serve to safe and reliable electricity through sustainable investment in our network.

We do that by building and maintaining the poles, wires, transformers, and other assets that deliver power to your door. We continually invest in these assets to ensure your electricity supply meets your needs – both now and in the future.

We also work hard to help keep your energy prices affordable by planning carefully and delivering efficiently. Our revenues are set by the Commerce Commission and we update our prices once a year. These prices reflect the costs of operating and investing in the network.

This year's change is a combination of:

	Change		Weighting		Result
Distribution	15.2%	x	69%	=	10.5%
Transmission	-0.2%	x	31%	=	-0.1%
<b>Overall</b>					<b>10.4%</b>

Your prices have two parts; our distribution component and what Transpower charges us to use the national grid. Together these make up around 38% of your total electricity bill. The other 62% of your bill is made up of all non-Powerco charges including generation costs, your retailer's charges and GST.

The tables below show how these charges have changed. The overall impact on your electricity bill will depend on a few things, such as how and when you use our network and how your retailer chooses to structure the prices they charge you.
